DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/10/2007 has been entered.
2. Claims 2, 4, and 6 are currently pending.

Response to Arguments

3. Applicant's arguments with respect to claims 2, 4, and 6 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

4. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
5. Claims 2, 4, and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Penn et al. (US 6,217,608). Penn et al. disclose a stent (Fig 6) with an expandable tubular support frame including a plurality of ring segments formed by struts and U-shaped arcuate sections (550, 560). Adjacent ring segments are linked by first (570) and second (540) connectors that alternate in the same circumferential plane and along

the longitudinal axis. Each connector has a u-shaped compensating section and arcuate legs curved in the same circumferential direction. The first connectors are longer in length than the second connectors, where the length is defined as the distance across the connector in the circumferential direction. The ring segments define wave crests and valleys, which confront one another. Furthermore, connections joining the connectors confront one another.
